

Guavio dam owned by Emgesa

Generation

(102-2) (102-4) (102-6)(102-7)

Our focus is on finding low-emission energy solutions to facilitate a transition towards a diversified and sustainable energy mix.

Our achievements in 2019

With Emgesa, we are positioned as the number one company in the electricity generation market in Colombia in terms of installed capacity and volume of energy generation.

We started the installation of the **first battery storage system in Colombia**, providing an additional 7 MW of capacity to the Termozipa power plant.

We executed the **automation and remote control project** that allows the Darío Valencia, Laguneta and El Salto power plants to have remote control from the Guaca power plant.

As a Corporate Group, **we entered the generation business in Peru** through the acquisition of Peru Power Company as part of the Electro Dunas Group.

Our challenges

We will continue to consolidate Emgesa's market position, in the context of an energy transition, as our vehicle for growth in the generation business in Colombia.

We will monitor and manage proposed changes to market regulations, as well as proposals made by the Energy Transformation Mission and the regulatory agenda of the Energy and Gas Regulatory Commission (CREG, for the Spanish original).

We will encourage growth in the Peruvian market in a situation of oversupply and low prices in the generation market.

We will seek opportunities for growth in generation markets where we have a presence as a Corporate Group.
